August 2014
List of appendices

Appendix 1: Papers on patients information needs in nursing care .......................................................... 3
Appendix 2: Non-nursing literature related to information exchange ......................................................... 7
Appendix 3: School Research Ethics Committee approval – main study .................................................... 14
Appendix 4: NHS National Research Ethics Services approval – main study ............................................ 15
Appendix 5: NHS Research and Development approval – main study ...................................................... 16
Appendix 6: Letter to Director of Nursing ................................................................................................. 17
Appendix 7: Sample letter to Heads of Nursing ....................................................................................... 19
Appendix 8: Sample letter to Lead Nurses ............................................................................................... 21
Appendix 9: Nurse information sheet – main study ................................................................................. 22
Appendix 10: Nurse invitation letter – main study ................................................................................... 25
Appendix 11: Nurse consent form – main study ....................................................................................... 26
Appendix 12: Patient information sheet – main study ............................................................................. 27
Appendix 13: Patient invitation letter – main study ................................................................................ 31
Appendix 14: Patient consent form – main study .................................................................................... 32
Appendix 15: Semi-structured observation schedule ............................................................................... 33
Appendix 16: Observation research in ward settings ............................................................................... 34
Appendix 17: Nurse semi-structured interview schedule ........................................................................... 50
Appendix 18: Nurse semi-structured interview schedule ......................................................................... 51
Appendix 19: Decisions made within the code of ‘Factors affecting information exchange’ ................... 52
Appendix 20: School Research Ethics Committee approval – pilot study .............................................. 55
Appendix 21: NHS National Research Ethics Services approval – pilot study ........................................ 56
Appendix 22: NHS Research and Development approval – pilot study ................................................ 57
Appendix 23: Nurse information sheet – pilot study ............................................................................... 58
Appendix 24: Nurse invitation letter – pilot study .................................................................................... 62
Appendix 25: Surgical patient information sheet – pilot study ............................................................... 63
Appendix 26: Surgical patient invitation letter – pilot study ................................................................... 66
Appendix 27: Surgical patient response form – pilot study ..................................................................... 67
Appendix 28: Medical patient information sheet – pilot study ............................................................... 68
Appendix 29: Medical patient invitation letter – pilot study ................................................................... 72
Appendix 30: Explanation of paternalism and paternalistic language .................................................... 73
Appendix 31: Questions asked by patients and by nurses ....................................................................... 74
## Appendix 1: Papers on patients information needs in nursing care

<table>
<thead>
<tr>
<th>Authors</th>
<th>Type of study</th>
<th>Aims</th>
<th>Results</th>
<th>Limitations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Smith &amp; Liles (2007) UK</td>
<td>Quantitative</td>
<td>To explore the information needs of patients who have received treatment for a myocardial infarction before their discharge home from an acute hospital.</td>
<td>Patients wanted information about medications, complications and physical activities. Also, driving, returning to work and sources of support were areas of concern. Retired older patients wanted more information that employed younger patients.</td>
<td>Small sample from one hospital limits generalising to a wider population. Focuses on patients with uncomplicated MI thus does not report on information needs of patients with more complex information needs.</td>
</tr>
<tr>
<td>Suhonen et al. (2005)</td>
<td>Quantitative</td>
<td>To describe and compare the information patients want with the information they receive and examine whether this varies between patients.</td>
<td>Patients want information about medical issues such as illness and treatment. Follow-up care and less technical care information were perceived as less important.</td>
<td>Data collection tool designed with reference to national legislation and ‘previous studies’, although it is unclear which previous studies the authors are referring to. Also, the sample represented only 59% of the eligible patients.</td>
</tr>
<tr>
<td>Lemonidou et al. (2003)</td>
<td>Quantitative</td>
<td>To investigate and compare Greek patients’ and nurses’ perceptions of the realisation of autonomy, informed consent and privacy in surgical nursing care.</td>
<td>Autonomy, informed consent and privacy were not perceived by patients as being as realised as perceived by nurses. Nurses perceived that information provision was realised more than any other concept. Patients were given choices over some treatments, length of stay and dietary requirements.</td>
<td>Focus on information provision. Convenience sampling may also have limited the study.</td>
</tr>
<tr>
<td>Sainio &amp; Lauri (2003)</td>
<td>Quantitative</td>
<td>To identify to what extent cancer patients participate in decision-making, and to what extent background characteristics, information obtained and relationships with staff, explain cancer patients’ participation in decision-making.</td>
<td>Patients receiving ‘enough’ information, and about ‘different issues’, participated more in treatment and nursing care decisions.</td>
<td>Unclear how questionnaire could measure ‘enough’ information. Unclear what all the ‘different issues’ are. Lack of patients perspectives in research design. Focuses on cancer patients only.</td>
</tr>
<tr>
<td>Jacobs (2000)</td>
<td>Quantitative</td>
<td>Explores 45 patients perceptions of the discharge information needed after short-term surgical procedures.</td>
<td>Patients wanted information about activity levels, ADLs, treatments and complications</td>
<td>Focus on information provision. Retrospective-type questions may be limited in that patients may not remember what information they had been given.</td>
</tr>
</tbody>
</table>
### Appendix 1: Papers on patients information needs in nursing care (continued)

<table>
<thead>
<tr>
<th>Authors</th>
<th>Type of study</th>
<th>Aims</th>
<th>Results</th>
<th>Limitations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lithner &amp; Zilling (2000)</td>
<td>Quantitative</td>
<td>To investigate patients’ needs for pre-operative and post-operative information.</td>
<td>Patients admitted for cholecystectomy wanted lots of information particularly related to anxiety-creating factors such as pain and post-operative symptoms.</td>
<td>Eliciting patients’ information needs for pre- and post-operative care was intended for use in developing standardised information resources rather than for informing a process of information exchange.</td>
</tr>
<tr>
<td>Turton (1998) UK</td>
<td>Quantitative</td>
<td>To gain insight into patients’ and their spouse/partners’ perceptions of information needs in post-MI education. Also, to ascertain how much importance they attach to particular information items in post-MI education. Furthermore, the results were compared with nurses perceptions of information categories on the same post-MI education scale</td>
<td>Nurses’ perceptions of what some information was most and least important were significantly different from those of the two other groups. However, there was some congruency between the three groups.</td>
<td>Focus on information provision. Patient questionnaire (Cardiac Patients Learning Needs Index) developed without patient input.</td>
</tr>
<tr>
<td>Logan et al. (2008) UK</td>
<td>Qualitative</td>
<td>To explore patients’ experiences of learning how to perform intermittent self-catheterisation and to assess patients views of how the service is provided.</td>
<td>Patient experiences were categorised as: psychological issues, physical problems and service interaction.</td>
<td>Focuses on information provision and patient compliance. Confusion over information provision and exchange.</td>
</tr>
<tr>
<td>May et al. (2006)</td>
<td>Qualitative</td>
<td>To explore patients’ experiences of compression stockings and ascertain perceptions of their use</td>
<td>Patients received little or no information from healthcare staff about compression stockings. They received information from other sources.</td>
<td>Focus on information provision and patient compliance. Retrospective accounts from patients rather than first-hand accounts may affect the quality of the data collected. Unsure whether semi-structured interview schedule developed with patient input – it was piloted with 2 subjects but not known if they were patients. Study too specific to cardiac compression stockings therefore limiting usefulness in other areas.</td>
</tr>
</tbody>
</table>
### Appendix 1: Papers on patients information needs in nursing care (continued)

<table>
<thead>
<tr>
<th>Authors</th>
<th>Type of study</th>
<th>Aims</th>
<th>Results</th>
<th>Limitations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Doherty &amp; Doherty (2005)</td>
<td>Qualitative</td>
<td>To identify aids and barriers to increasing patient involvement in decision making.</td>
<td>20% of patients chose an active role in decision-making. 80% chose a collaborative or passive role. What patients chose as their preference on the autonomy scale was not reflected in the interview. The NHS maintains a paternalistic approach and disempowerment of nurses due to lack of staff, lack of information and no effective continuity of care.</td>
<td>Reports in terms of percentages with a small sample. For example, 40% sounds a lot, but in this study it amounts to 8 participants. Focus on patients over 60yrs, so not eliciting data from younger patients</td>
</tr>
<tr>
<td>Donohue (2003)</td>
<td>Qualitative</td>
<td>To understand the nature and processes of nurse practitioner and client encounters in an ambulatory care context.</td>
<td>Patients in this study were happy with little information exchange, and expected to receive instruction and advice.</td>
<td>Focus on information provision. Small sample size (patients n=8, nurses n=2), so cannot generalise that all patients would consider the lack of information unproblematic.</td>
</tr>
<tr>
<td>Aveyard (2002a) UK</td>
<td>Qualitative</td>
<td>Examines the way information is provided and consent is obtained, by nurses</td>
<td>Nurses administer care claiming they have received implied consent from patients. However, as care was delivered with very little information provided, the implied consent may more realistically be called compliance.</td>
<td>Focus on information provision. This was not an observational research study – the researchers listened to what the nurses said they did, and reported it as how nurses actually did things in practice.</td>
</tr>
<tr>
<td>Suhonen &amp; Leino-Kilpi (2006)</td>
<td>Literature review</td>
<td>To explore what is known about surgical patients’ information needs, patients’ perspectives about the information given and the effect of any individualised information</td>
<td>Surgical patients’ information needs are specific. Some patients were not given the information that they need.</td>
<td>Focus on information provision. Unsure whether patients had input into the data collection tools in the studies reviewed. Review focused on the needs of surgical patients and so needs of medical patients and those with chronic conditions may differ</td>
</tr>
</tbody>
</table>
## Appendix 1: Papers on patients information needs in nursing care (continued)

<table>
<thead>
<tr>
<th>Authors</th>
<th>Type of study</th>
<th>Aims</th>
<th>Results</th>
<th>Limitations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aveyard (2002b) UK</td>
<td>Theoretical discussion</td>
<td>To examine the extent to which there is a requirement to obtain informed consent prior to nursing care procedures.</td>
<td>The argument is that the function of informed consent is to protect patient autonomy and to promote meaningful decision-making. Consent should always be obtained when there is a threat to patient autonomy.</td>
<td>Focus on information provision.</td>
</tr>
</tbody>
</table>
### Appendix 2: Non-nursing literature related to information exchange

<table>
<thead>
<tr>
<th>Authors</th>
<th>Type of study</th>
<th>Aims</th>
<th>Results</th>
<th>Limitations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fullwood et al. (2013)</td>
<td>Quantitative</td>
<td>To explore characteristics of patients and family practices that are associated with patient experiences of SDM in the UK.</td>
<td>The mean SDM score was low for patients with irritable bowel syndrome (IBS). Younger patients and patients with poor health status reported lower degrees of SDM</td>
<td>The study was undertaken in only one socioeconomically deprived area therefore results may not be representative of the UK as a whole.</td>
</tr>
<tr>
<td>Isaacs et al. (2013)</td>
<td>Quantitative</td>
<td>To assess the relationship between older adults perceptions of SDM in the choice of analgesic for acute musculoskeletal pain and 1) patient satisfaction with the analgesic and 2) changes in pain score at 1 week.</td>
<td>52% reported receiving information about analgesic options. 31% reported participating in analgesic selection. Those who received information were more likely to report satisfaction with the analgesic. Those who participated in the decision also reported more satisfaction with the analgesic and reported lower pain scores. Therefore, SDM in analgesic selection in older adults with acute musculoskeletal pain may improve health outcomes.</td>
<td>Not specifically about information exchange but about SDM of which information exchange is a part. Some patients did not participate due to pain or wanting to call a doctor. Their non-participation may have biased the sample. SDM was assessed at the same time as outcome measures. Therefore pain relief may have influenced the reporting of the information provided and participation in SDM.</td>
</tr>
<tr>
<td>Arnetz et al. (2010)</td>
<td>Quantitative</td>
<td>To investigate whether patient involvement in care during hospital stay for acute MI was associated with health and behavioural outcomes</td>
<td>Positive ratings of involvement were significantly associated with fewer symptoms 6-10 weeks post discharge.</td>
<td>Not specifically related to information exchange but includes information provision and patient involvement. Uses registry data and some participants were lost to follow-up. Patients responses were retrospective, which may have resulted in recall bias.</td>
</tr>
<tr>
<td>Andreassen et al. (2007)</td>
<td>Quantitative</td>
<td>Investigates self-reported information needs of patients with oesophageal cancer, and compares with the perceptions of health professionals. This pilot study tested a study specific questionnaire</td>
<td>Information needs included: tests/treatment; self-care; follow-up care; support for family members; and outcomes of treatment. Information needs were substantial and not adequately met by health professionals.</td>
<td>Not specifically about information exchange. Pilot study. Lengthy questionnaire. Small sample size. Low response rate. Possible ceiling effect either because patients had extensive information needs or because of a failure in the questionnaire.</td>
</tr>
<tr>
<td>Beaver and Booth (2007)</td>
<td>Quantitative</td>
<td>Investigates patients information needs in colorectal and gynaecological cancers</td>
<td>Information needs of patients with gynaecological cancer were reported as: likelihood of cure; spread of disease; and side effects of treatment. Findings consistent with patients with breast &amp; colorectal cancer</td>
<td>Not focussed on information exchange. Possible selection bias as clinicians indicated patients suitable for inclusion. Information needs questionnaire developed previously from literature reviews but not with patient input.</td>
</tr>
</tbody>
</table>
### Appendix 2: Non-nursing literature related to information exchange (continued)

<table>
<thead>
<tr>
<th>Authors</th>
<th>Type of study</th>
<th>Aims</th>
<th>Results</th>
<th>Limitations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Van den Brink-Muinen et al. (2006)</td>
<td>Quantitative</td>
<td>Aims to get insight into changes to patients’ involvement in decision-making processes over time. Investigates GP’s communication about: treatment, alternatives and side-effects; informed decision-making; and obtaining consent.</td>
<td>Most patients received the information they wanted before the consultation. ‘Overuse’ of information to patients who did not want it. GP’s who gave more information also involved patients more in decision-making</td>
<td>Structured questionnaire related to specific categories pre-determined by the researchers. Lack of exploration of patients perceptions. Ambiguity between terms ‘not important’ and ‘not wanted’.</td>
</tr>
<tr>
<td>Edwards and Elwyn (2004) UK</td>
<td>Quantitative Longitudinal study</td>
<td>To identify professionals’ attitudes during participation in a large practice-based intervention study with substantial individual exposure to SDM and risk communication, and to assess their confidence with these approaches and reported frequency of implementing them.</td>
<td>GPs indicated positive attitudes towards involving patients and towards the training interventions. Only occasional use of the risk communication packs outside of the trial. Time constraints were an important consideration in not implementing the SDM approach more frequently.</td>
<td>Group sizes small limiting the making of comparisons and inferences. Possible Hawthorne effect. Focus on GPs training, so no focus on patients.</td>
</tr>
<tr>
<td>Krag et al. (2004)</td>
<td>Quantitative</td>
<td>Investigated the spontaneous provision of information about side effects of treatment and medication by GP’s to patients.</td>
<td>Information related to side effects was only provided by GP’s if the side effects were common, and if the GP thought it was in the patient’s best interests to receive the information. The main reason for information provision was so that patients would comply with treatment.</td>
<td>Paternalistic approach. Focus on information provision. Focus on GP’s, not patients. Questionnaires based on hypothetical case studies – uncertain if GP would provide same information in practice.</td>
</tr>
<tr>
<td>Ford et al. (2003)</td>
<td>Quantitative</td>
<td>Investigates information and decision-making expectations of GP patients.</td>
<td>Mismatch between information patients wanted and information they received.</td>
<td>Small number of patients with psychosocial problems makes general practice sample untypical. Investigates patients perceptions rather than being an objective assessment of what actually happened during consultations. No tangible data on how patients define SDM.</td>
</tr>
</tbody>
</table>
### Appendix 2: Non-nursing literature related to information exchange (continued)

<table>
<thead>
<tr>
<th>Authors</th>
<th>Type of study</th>
<th>Aims</th>
<th>Results</th>
<th>Limitations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Godolphin et al. (2001)</td>
<td>Quantitative</td>
<td>To find out how much patient information material on display in doctors' surgeries refers to management choices and hence useful for SDM. To evaluate the quality of the print information exchanged during consultations.</td>
<td>Noted that written information provided was not enough to facilitate decision-making. Major deficiencies related to mention of choices, risks, effect of no treatment or uncertainty and reliability.</td>
<td>Evaluated printed information in Vancouver, Canada. Printed information may be different in the UK. DISCERN, the instrument used to evaluate the information had good inter-rater reliability. However, there were some questions that caused difficulty and some debate. Snapshot study of physicians who stated they used printed information. The quality and amount of information cannot be generalised to other practices.</td>
</tr>
<tr>
<td>Beaver et al. (1999)</td>
<td>Quantitative</td>
<td>Compares and contrasts two previous studies examining decision-making role preferences and information needs for patients with colorectal cancer and breast cancer.</td>
<td>There are differences in decision-making role preferences with the majority of colorectal cancer patients preferring a passive role. There are similarities in information needs. Both colorectal and breast cancer patients want information about cure, spread of disease and treatment options.</td>
<td>The approaches used in the colorectal and breast cancer groups differed. Small sample sizes in the colorectal group limits generalisability. Also, colorectal cancer patients were from one consultant’s practice. Individual patients may have developed a trusting relationship with a health professional and hence may have deferred decision-making responsibility.</td>
</tr>
<tr>
<td>Entwistle et al. (2006)</td>
<td>Mixed methods</td>
<td>Explores information needs and decision-making in women requiring hysterectomy.</td>
<td>Women were not given much opportunity to influence the selection of a surgical procedure. Women want information but not necessarily to make decisions.</td>
<td>Not specifically about information exchange. Other surgical procedures may not have the same variances as hysterectomy. Retrospective questioning, although participants felt able to recall the information requested.</td>
</tr>
<tr>
<td>O’Brien et al. (2013)</td>
<td>Qualitative</td>
<td>To identify patients’ and physicians’ perceptions of physician-related verbal and nonverbal facilitators and barriers to patient involvement in treatment decision-making.</td>
<td>Patients and physicians described similar information-giving facilitators. Few physician barriers to women’s involvement in decision-making were identified.</td>
<td>Physicians were already interested in involving women in decision-making. Focus was on women with early stage breast cancer. Results may have been different for patients with other types of cancer. All the study physicians were in the age range of 34-44 with relatively few years in practice. Perhaps older physicians would have different behaviours and perspectives. Phase 1 depended on women’s recall of the consultation, whereas in Phase 2 women were asked for their perceptions whilst watching a DVD of the consultation.</td>
</tr>
</tbody>
</table>
## Appendix 2: Non-nursing literature related to information exchange (continued)

<table>
<thead>
<tr>
<th>Authors</th>
<th>Type of study</th>
<th>Aims</th>
<th>Results</th>
<th>Limitations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Shortus et al. (2011)</td>
<td>Qualitative</td>
<td>To investigate provider perspectives on the role of patient involvement in chronic disease decision-making</td>
<td>Care providers were motivated by a sense of responsibility but differed in what the ‘best care’ meant. Care providers also manipulated patient involvement in support of care provider’s agenda and what they want the outcome to be.</td>
<td>Focus is on SDM rather than information exchange specifically. Also, participants were all health professionals and not patients.</td>
</tr>
<tr>
<td>Zoffman et al. (2008)</td>
<td>Qualitative</td>
<td>Studies patient/professional interactions in the context of managing poorly controlled diabetes. Aims to develop a theory that details how communication and reflection between patients and professionals might lead to adequate SDM.</td>
<td>Co-creating person specific knowledge required communication, and situational and mutual and independent patient reflection. Professionals avoided communicating with patients on difficult issues, due to tensions caused by difficult feelings and different points of view. Person-centred Communication and Reflection Model developed to assist SDM. The authors say this model is useful for SDM for patients with other chronic conditions.</td>
<td>Not specifically about information exchange but about SDM in chronic care. Specific to patients with poorly controlled diabetes – the model needs to be tested in other contexts.</td>
</tr>
<tr>
<td>Jepson et al. (2007)</td>
<td>Qualitative</td>
<td>Investigates patients’ information needs in the context of cancer screening.</td>
<td>Patients wanted to know contextual information such as personal risk factors, the disease condition being screened for, and symptoms, not just about the benefits, reliability and limitations of the screening process. ‘Protectionism’ and ‘right to know’ discourse. The desire for more information may not be used for decision-making.</td>
<td>Not specifically about information exchange. Does not elicit information needs of people who do not attend for cancer screening. Data collected in local area in Scotland may not represent the population of the whole of Scotland, or the UK.</td>
</tr>
<tr>
<td>Bugge et al. (2006)</td>
<td>Qualitative</td>
<td>To examine the reasons that patients and health professionals give for non-disclosure of particular elements of information in particular circumstances. To consider the implications of the information not exchanged.</td>
<td>The types of information not exchange were diverse and the reasons for non-disclosure varied. Some instances of non-disclosure had negative implications for decision-making and healthcare experience. However some instances of non-disclosure were not problematic.</td>
<td>Categorisation of ‘types’ of information may be incomplete. Participants may also have withheld information from the researcher. Sampling did not reach theoretical saturation potentially resulting in types of information not exchanged may have been missed.</td>
</tr>
</tbody>
</table>
## Appendix 2: Non-nursing literature related to information exchange (continued)

<table>
<thead>
<tr>
<th>Authors</th>
<th>Type of study</th>
<th>Aims</th>
<th>Results</th>
<th>Limitations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Towle et al. (2006)</td>
<td>Qualitative</td>
<td>Investigates the practice and perceptions of trained GP's attempting to implement informed SDM, and to identify the barriers they face.</td>
<td>The GP’s liked the informed SDM model. Although able to elicit patients’ perspectives and agree action plans, they were unable to elicit patients’ roles, or information, preferences. Barriers included problems with competency.</td>
<td>Not focussed on information exchange. Focus on health professionals perspectives, not on patients. Participants known to be interested in encouraging patients to be involved in decision-making – coupled with small sample size ( (n = 6) ) – and not representative of all GP’s.</td>
</tr>
<tr>
<td>Nelson et al. (2005)</td>
<td>Qualitative</td>
<td>Investigates what information is relevant and significant for clinician and patient/family communication when critical illness becomes chronic</td>
<td>6 major domains of important and significant information were found: nature of illness; prognosis; impact of treatment; potential complications; expected care needs after hospitalisation; and alternatives to continuation of treatment.</td>
<td>Several factors affected their sample size. White women were over-emphasised despite efforts to avoid bias. Patients declining to participate may have given different responses. Relatively small sample size. Focus on one institution may not be representative of other areas, although findings are consistent with other studies. Dependence on participants recollection rather than using real time observations.</td>
</tr>
<tr>
<td>Lee and Garvin (2003)</td>
<td>Qualitative 3 case studies</td>
<td>To examine and challenge commonly accepted practices of information transmission in healthcare settings</td>
<td>Demonstrates paternalistic practices as insufficient because they are rooted in a one-way transfer of information rather than sharing information.</td>
<td>Case studies one and two only included women in the study and not men, which may have biased the resulting data.</td>
</tr>
<tr>
<td>Caress et al. (2002) UK</td>
<td>Qualitative</td>
<td>Explores preferred treatment decision-making roles, and rationales for role preferences. Seeks to identify facilitators and barriers from attaining preferred role</td>
<td>Active, collaborative and passive role preferences were identified. Role preferences are influenced by many and varied factors. Facilitators and barriers to attaining role preference included condition-related knowledge, practice issues and clinicians’ interpersonal skills. Most patients wanted to feel involved in the decision-making process but did not want to control it.</td>
<td>Qualitative design limits external validity and hence limited generalisability. Recruitment rate was 50%. Recruitment was lower in primary care than in secondary care, which may have influenced the themes arising from the data. Exclusion of patients unable to converse in English may have limited the results as their decisional role preferences may have differed.</td>
</tr>
</tbody>
</table>
## Appendix 2: Non-nursing literature related to information exchange (continued)

<table>
<thead>
<tr>
<th>Authors</th>
<th>Type of study</th>
<th>Aims</th>
<th>Results</th>
<th>Limitations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rogers and Todd (2002)</td>
<td>Qualitative</td>
<td>Explores the exchange of symptom and clinical information between cancer patients and oncologists in outpatient’s clinics.</td>
<td>Patient information elicited on a hierarchy basis based on its utility in making treatment decisions rather than for symptom management. If patients gave negative information it was not addressed when positive clinical information was present and cancer treatment not indicated.</td>
<td>Paternalistic approach. Possible Hawthorne effect as researcher sat in on consultations. However, participants were given a vague description of the purpose of the research, which may have reduced the Hawthorne effect. Small sample size limits generalisability.</td>
</tr>
<tr>
<td>Wade et al. (2000)</td>
<td>Qualitative based on secondary data</td>
<td>Examines information needs of women post-hysterectomy using secondary data for analysis.</td>
<td>Women wanted treatment choices and to play a part in decision-making. Women also want accurate and useful information at appropriate times.</td>
<td>Secondary data analysis. No means of checking data or of probing or exploring patients’ perspectives as data were anonymous. Data collected in 1994 so not up to date, however hysterectomy care has not changed much since. Retrospective accounts were relied on, which is subject to bias.</td>
</tr>
<tr>
<td>Moumjid et al. (2003)</td>
<td>Qualitative pilot study</td>
<td>To assess the clinical issues addressed during the medical encounter; to assess the feasibility of the process of SDM in clinical practice; and to assess patient’s desires concerning the question of who should take the decision in breast cancer treatments.</td>
<td>Most patients were satisfied regarding the possibility to participate in decision-making, even knowing that in France offering treatment choice is unusual. SDM is feasible in clinical practice.</td>
<td>Set in France where SDM is very unusual. Limited series of patients included in the study, which may have resulted in their results differing from those of others.</td>
</tr>
<tr>
<td>Hubbard et al. (2007)</td>
<td>Literature review UK</td>
<td>To review the literature on cancer patients’ involvement in healthcare research, policy and planning, and practice.</td>
<td>131 documents included in review. Patients had a lot of involvement in research but less so in policy and planning and in practice. Men, children and patients who are socially deprived were rarely involved. Training and information, resourcoss and a change in attitudes and roles would facilitate more involvement</td>
<td>Due to the vast topic area the authors are aware that they may not have included all papers in the review. Not specifically about information exchange.</td>
</tr>
</tbody>
</table>
## Appendix 2: Non-nursing literature related to information exchange (continued)

<table>
<thead>
<tr>
<th>Authors</th>
<th>Type of study</th>
<th>Aims</th>
<th>Results</th>
<th>Limitations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pinquart and Duberstein (2004)</td>
<td>Literature review</td>
<td>Provides an overview of age-differences in patients’ preferences for participation in cancer treatment decision-making and factors that relate to the age-differences</td>
<td>Generally, older patients prefer less information about their illness and treatment and assume a less active role in making treatment decisions. They are also less likely to seek out information.</td>
<td>Not specifically about information exchange.</td>
</tr>
<tr>
<td>Ziegler et al. (2004)</td>
<td>Literature review</td>
<td>Reviewed literature in relation to patients’ experiences of psychological and functional difficulties, and decision-making in patients with head and neck cancer.</td>
<td>Respondents wanted information readily available and delivered by a specialist. Written information was often inadequate. Patients wanted information about treatment plan at the outset rather than incrementally.</td>
<td>Some studies reviewed asked surgeons and nurses to identify patients’ information needs, instead of using patient input.</td>
</tr>
<tr>
<td>Scott and Thompson (2003)</td>
<td>Literature review of quantitative literature</td>
<td>Examines information needs of post-MI patients and their families</td>
<td>Patients preferred doctors over nurses as information providers. Patients and nurses perceptions of information needs post-MI differ.</td>
<td>Focus more on information needs rather than information exchange Specific context of information needs post MI. In the literature, patients have generally not been involved in the design of patients’ information needs assessment instruments</td>
</tr>
<tr>
<td>Montori et al. (2006)</td>
<td>Theoretical discussion</td>
<td>To discuss the Charles et al. approach to SDM as applied to patients with chronic conditions and their clinicians.</td>
<td>The authors perceive differences in the types of decisions that are made in the context of chronic care for example end of life decisions and surgical treatment of cancer. Decisions in chronic care contexts more likely require an active patient role and there is likely to be a longer window of opportunity to make decisions and to revisit decisions made.</td>
<td>Not a research study, although areas for research are mentioned throughout. Not specifically about information exchange but about SDM of which information exchange is a part.</td>
</tr>
<tr>
<td>Charles et al. (1999) Canada</td>
<td>Theoretical discussion</td>
<td>To revisit an earlier theoretical paper and add more elements to the conceptual framework.</td>
<td>Identifies explicit steps; recognises that the approach adopted at the start of an interaction may change as the encounter changes; identifies other decision-making approaches; gives practical implications for practice, research and education.</td>
<td>The discussion is limited to patient and physician encounters and so may not be generalisable to patient encounters with other health professionals.</td>

Dear Vivianne

A qualitative case study of information exchange between patients and nurses in ward settings

Thank you for submitting the clarification for your proposal, entitled as above, to me the Chair of the Departmental Research Ethics Committee on Thursday 4 March 2009.

I am pleased to advise you that your proposal has been approved.

Many thanks

Len Dalgleish, PhD
Chair
Appendix 4: NHS National Research Ethics Services approval – main study

West of Scotland REC 4

LIST OF SITES WITH A FAVOURABLE ETHICAL OPINION

For all studies requiring site-specific assessment, this form is issued by the main REC to the Chief Investigator and sponsor with the favourable opinion letter and following subsequent notifications from site assessors. For issue 2 onwards, all sites with a favourable opinion are listed, adding the new sites approved.

<table>
<thead>
<tr>
<th>REC reference number:</th>
<th>09/S0704/26</th>
<th>Issue number:</th>

Dear Mrs Crispin,

Reference Number: GN09NR193
Project Title: A qualitative case study of information exchange between patients and nurses in ward settings.
Chief Investigator: Mrs Vivianne J Crispin

I am pleased to confirm that Greater Glasgow & Clyde Health Board is now able to grant Management Approval for the above study.

As a condition of this approval the following information is required during the lifespan of the project:
1. SAES/SUSARS – If the study is a Clinical Trial as defined by the Medicines for Human Use Clinical Trial Regulations, 2004 (CTIMP only)
2. Recruitment Numbers on a quarterly basis (not required for commercial trials)
3. Any change of Staff working on the project named on the ethics form
4. Change of CI
5. Amendments – Protocol/CRF etc
6. Notification of when the Trial / study has ended
7. Final Report
8. Copies of Publications & Abstracts

Please add this approval to your study file as this letter may be subject to audit and monitoring.

Yours sincerely

[Signature]

Dr Maureen Travers
Academic Research Co-ordinator
Appendix 6: Letter to Director of Nursing

16th February 2009

Mr Rory Farrelly
Director of Nursing for Acute Services
Southern General Hospital
1345 Govan Road
GLASGOW
G51 4TF

Dear Mr Farrelly

Subject: A qualitative case study of information exchange between patients and nurses in ward settings.

I am a PhD student at the University of Stirling undertaking a qualitative project exploring information exchange between patients and nurses relating to routine nursing care. I am looking for your support in conducting the project in NHS Greater Glasgow and Clyde. Specifically, I would like to conduct the research in medical and surgical wards in Glasgow Royal Infirmary.

Information exchange has previously been studied in the context of out-patient clinics, and GP surgeries, however, this study will be the first of its kind in looking at the process of information exchange in ward settings. The study is being carried out in two stages: a pilot study, followed by the main study. The pilot study is currently underway in NHS Forth Valley, and it is the main study that I wish to carry out in Glasgow Royal Infirmary.

NHS ethics and R&D approval was granted for the pilot study and will be sought for the main study, once the necessary amendments are made following the pilot. I will send you copies of the relevant letters once approval has been obtained. What I would like to do at this point is to raise the awareness of the study with the senior nurses at Glasgow Royal Infirmary and discuss the best ways to move forwards for when final permissions are in place.

I have enclosed the main study proposal, along with supporting documentation, for your information. The key issues I would like to draw to your attention are:

- Data collection involves observing nurse-patient interactions. I will be present within the ward environment to undertake observations and interviews.
- Only patients and nurses who have consented will be observed and asked to take part in interviews.
- The study involves patients and nurses – clinicians and other AHP's are not included.
• A radio-controlled microphone system will be used for recording observations; therefore I will be able to maintain a reasonable distance from the patient.
• If possible, I would like to be able to interview patients and nurses in private. Therefore, I would like to be able to use a room in, or near the ward if one is available.
• Posters and leaflets informing all staff and visitors to the ward of the study will be clearly displayed within the ward area. I have enclosed one of these posters for your information.

I would be delighted to come in and discuss the project with you and/or your senior team further. If you require any further information in order to reach a decision about your support (pending permissions) please do not hesitate to get in touch. If your support is given I will write to the lead medical and surgical nurses in GRI in order to raise their awareness of the study.

I look forward to hearing from you.

Yours sincerely,

Vivianne Crispin
Postgraduate Research Student

Subject: A qualitative case study of information exchange between patients and nurses in ward settings.

Dear Joyce Brown/Lesley Meikle

I am a PhD student at the University of Stirling undertaking a qualitative project exploring information exchange between patients and nurses relating to routine nursing care. I am looking for your support in conducting the project in NHS Greater Glasgow and Clyde. Specifically, I would like to conduct the research in medical and surgical wards in Glasgow Royal Infirmary.

The study is being carried out in two stages: a pilot study, followed by the main study. The pilot study is currently underway in NHS Forth Valley, and it is the main study that I wish to carry out in Glasgow Royal Infirmary.

As you are aware, I have received support for this project from Rory Farrelly, the Nursing Director. Furthermore, NHS ethics and R&D approval was granted for the pilot study and will be sought for the main study, once the necessary amendments are made following the pilot. I will send you copies of the relevant letters once approval has been obtained.

What I would like to do at this point is to meet with you to discuss the best ways to move forwards for when final permissions are in place.

I have attached the main study proposal, along with supporting documentation, for your information. The key issues I would like to draw to your attention are:

- Data collection involves observing nurse-patient interactions. I will be present within the ward environment to undertake observations and interviews.
- Only patients and nurses who have consented will be observed and asked to take part in interviews.
- The study involves patients and nurses – clinicians and other AHP’s are not included.
- A radio-controlled microphone system will be used for recording observations; therefore I will be able to maintain a reasonable distance from the patient.
• If possible, I would like to be able to interview patients and nurses in private. Therefore, I would like to be able to use a room in, or near the ward if one is available.
• Posters and leaflets informing all staff and visitors to the ward of the study will be clearly displayed within the ward area. I have attached one of these posters for your information.

I would be delighted to come in and discuss the project further with you. In order to expedite the study, and apply for ethical and management approval timeously, I wondered if it would be possible to meet with you before the 18th of March 2009.

If you require any further information please do not hesitate to get in touch.

I look forward to hearing from you.

Yours sincerely,

Vivianne Crispin

    Anne Irvine – PA to Rory Farrelly
16th June 2009

Dear

Subject: A qualitative case study of information exchange between patients and nurses in ward settings.
Researcher: Vivianne Crispin

Further to our discussions regarding the above project, I would like to take this opportunity to formally thank you for your support. I have now received a favourable ethical opinion for the study, management approval from Dr Maureen Travers, the R&D Officer for NHS GG&C, and an honorary research contract from Professor Chris Packard, the R&D Director. Copies of these letters are enclosed.

I have now had the opportunity to discuss the project with lead nurses and ward managers from orthopaedics, urology and general surgery, and I am delighted at the positive support you have all given me. As final permissions are now in place, I will email the relevant ward managers requesting the names of the registered nurses currently working in their wards, in order that the recruitment of nurses can get underway.

I anticipate that the recruitment and consent process will commence in late June 2009, and data collection will begin once written consent has been formally obtained from the participants.

Thank you once again for your support.

Yours sincerely

Vivianne Crispin
Postgraduate Research Student
University of Stirling

Information sheet for nurses

A qualitative case study of information exchange between patients and nurses in ward settings.
Introduction
You have been invited to participate in a research study. Before you agree to take part, it is important for you to understand why the research is being done, and what it will involve. Please take some time to read the information below. If you want more information, or have any queries about any of these points, please contact me on the telephone number overleaf.

What is the purpose of this project, and who is supporting it?
The study is a postgraduate student research project, which is supervised by Dr Carol Bugge and Dr Kath Stoddart at the Department of Nursing and Midwifery at the University of Stirling. The study is supported by a PhD studentship at the University of Stirling. The purpose of the study is to examine the information that patients and nurses tell one another about routine nursing care, and their views on that interaction. The study will run from April 2009 – April 2010.

Why have I been chosen?
You have received this invitation because you are a registered nurse, and you work in a surgical or medical ward in NHS Greater Glasgow and Clyde. As part of your job, you are interacting with patients on a day-to-day basis.

Do I have to take part?
Taking part in the study is voluntary, and it is entirely up to you whether or not to take part. I hope to meet with nurses in a group setting, offering you the opportunity to ask questions about this study, and clarifying any issues that you may have. If you are unable to attend the meeting but wish to get more information, I can meet with you individually at a time and place convenient for you. You can contact me on the number provided overleaf.

If you wish to take part, you can sign the consent form after the meeting and put it in the envelope provided, either for me to collect from your ward, or to post the signed consent form directly to me. If I have not heard from you after one week of the meeting, I will visit the ward to remind you of the study, and ask if you are willing to take part. If at this time you decide you do not want to take part, no further contact will be made.

Once you have signed the consent form, if you change your mind at any time, you are free to withdraw from the study, and without having to give a reason.

What will happen to me if I take part?
During your shift I will be sitting in the ward area observing and recording short sessions of communication between you and a patient you are caring for, in relation to the type of information that is shared between you. I will not be observing your hands-on nursing practice. During this stage of the study I will be audio-recording the interaction, and taking notes. Following the observations, I will interview you and the patient individually. The interview will also be audio-recorded.

The kind of questions I will ask you will be about the type and amount of information you have received. I am interested in whether or not you feel that the information you receive from the patient is sufficient for you. I will also want to explore how much
information you shared with the patient. The interview will take approximately 5-10 minutes, and will take place as soon as possible after the interaction at a time convenient to you. I will use the notes from my observations to prompt you. If you change your mind, any interaction between you and the patients in the ward will not be included in this study. Likewise, I will only be able to observe interactions, and conduct interviews with you if the patient has agreed to take part. In the highly unlikely event that I observe evidence of serious misconduct, I will inform the nurse in charge.

Will my taking part in the study be kept confidential?
Yes. I will audio-record each interaction, and take notes, during the observation stage, and the interview will also be recorded. Any irrelevant or identifiable information recorded will, if possible, be deleted, and will not be used in any way in the study. All notes and recordings have numbers, not names. All audio-recordings and any written records will be kept in a secure, locked environment for the duration of the study. Once the study is completed and the data is analysed, all audio-recordings will be destroyed. All written records will be archived in the University of Stirling for five years. Thereafter, they will be destroyed. My supervisors at Stirling University will monitor the study. You will not be identified in any written reports. Any quotes used from the recordings will be anonymised by the use of codes and false names. All identifiable information will be kept strictly confidential, known only to the researcher and the supervisors.

Who has approved this study?
This study has been reviewed by a NHS Research Ethics Committee which has responsibility for scrutinising proposals for medical research on humans, in accordance with the requirements of the Clinical Trials Regulations. In this case, the reviewing Committee was the Glasgow Royal Infirmary Ethics Committee who have raised no objections from the point of view of medical ethics. The study has also been approved by Stirling University Research Ethics Committee, and by NHS Greater Glasgow and Clyde Research and Development Office.

CONSENT FORM – Nurses

ID no.: 

Title of Project: A qualitative case study of information exchange between patients and nurses in ward settings.
Name of Researcher: Vivianne Crispin

Please initial box

1. I confirm that I have read and understand the information sheet dated............... (version ............) for the above study. I have had the opportunity to consider the information and ask questions, and have had these answered satisfactorily.

2. I understand that my participation is voluntary and that I am free to withdraw at any time without giving any reason.

3. I understand that data collected during the study may be looked at by individuals from the University of Stirling, only where it is relevant to my taking part in this research.

4. I consent to interactions with patients regarding their treatment and care being observed by the principal researcher. I am aware of my rights under the Data Protection Act (1998), which states that any audio-recordings or written material taken at the observation will be kept locked and secure.

5. I consent to being interviewed by the researcher. I am aware of my rights under the Data Protection Act (1998), which states that any audio-recordings or written material taken at the interview will be kept locked and secure.

6. I consent to things that I say as part of this study being used in the final report. I am aware that these quotes will be anonymised by the use of codes and false names so that I cannot be identified.

7. I agree to take part in the above study.

Information sheet for patients

A qualitative case study of information exchange between patients and nurses in ward settings

Version 3. 22/4/09
Introduction
You have been invited to take part in a research study. Before you agree to take part, it is important for you to understand why the research is being done, and what it will involve. Please take some time to read the information below. If you want more information, or have any queries about any of these points, please contact me on the telephone number overleaf.

What is the purpose of this project, and who is supporting it?
The study is part of a postgraduate student research project, which is supervised by Dr Carol Bugge and Dr Kath Stoddart at the Department of Nursing and Midwifery at the University of Stirling. The study is supported by the University of Stirling, and the researcher is carrying out this project to study for a PhD.

The purpose of the study is to look at the information that patients and nurses tell one another about routine nursing care, and to find out their views on their discussions.

The study will run from April 2009 – April 2010.

Why have I been chosen?
You have received this invitation because you have been admitted to hospital during the study dates. Male and female adult patients admitted to medical and surgical wards in NHS Greater Glasgow and Clyde have been invited to take part if they are considered well enough.

Do I have to take part?
Taking part in the study is voluntary, and it is entirely up to you whether or not to take part. If you are interested in taking part, please tell the nurse looking after you. The nurse will contact me and I will arrange to meet you. At this meeting you will be given the opportunity to ask questions about the research and, if you are still willing to take part, to sign a consent form.

If you change your mind at any time, you are free to withdraw from the study, without having to give a reason.

What will happen to me if I take part?
During your hospital admission, I will be sitting in the ward area watching and audio-recording discussions between you and the nurses caring for you. A small microphone will be placed on your bedside table and will only
be made live when the nurse taking part comes to talk to you. I will turn the microphone on and off from another area in the ward. I will be listening to the type of information that is shared between you and the nurse. During this stage of the research I will be taking notes.

Following the observations, I will interview you and your nurse individually. The interview will also be audio-recorded. The kind of questions I will ask you will be about the type and amount of information you have received. I am interested in whether or not you feel you have received enough information for your needs. I will also want to look at how much information you shared with the nurse. The interview will take about 20-30 minutes, and will take place in a quiet room in or near your ward, or beside your bed.

If you change your mind, any interaction between you and the nurses in the ward will not be included in this study. Likewise, I will only be able to observe interactions, and conduct interviews with you if the nurse looking after you has agreed to take part.

**Will my taking part in the study be kept confidential?**
Yes. I will audio-record each interaction, and will take notes during your discussions with the nurse. The interview will also be audio-recorded. You can ask for the recording machine to be switched off at any time. Any irrelevant information, or any information recorded that may identify you, will, if possible, be deleted, and will not be used in any way in the study. Likewise, any comments picked up from patients who have not consented to take part will not be used.

The nurse will not be told your answers to my questions in the interview. All notes and audio-recordings have numbers, not names.
All notes and audio-recordings will be kept locked and secure, during the study. Once the study is finished and the notes are analysed, all audio-recordings will be immediately destroyed. All written notes will be kept locked in the University of Stirling for five years. After five years they will be destroyed.

My supervisors at Stirling University will follow the study. You will not be identified in any written reports.
Codes and false names will be used if any quotes are used in reports. All identifiable information will be kept strictly confidential, known only to the researcher and the supervisors.

**Who has approved this study?**
This study has been reviewed by a NHS Research Ethics Committee which has the responsibility for scrutinising proposals for medical research on
humans, in accordance with the requirements of the Clinical Trials Regulations. In this case, the reviewing Committee was the Glasgow Royal Infirmary Research Ethics Committee who have raised no objections from the point of view of medical ethics.

The study has also been approved by Stirling University’s Department of Nursing and Midwifery Research Ethics Committee, and by NHS Greater Glasgow and Clyde Research and Development Office.

Version 3. 22/4/09 REC Reference Number: 09/S0704/26
Appendix 15: Semi-structured observation schedule

**Study title:** A qualitative case study of information exchange between patients and nurses in ward settings.

**Name of researcher:** Vivianne Crispin

This loosely structured observation schedule is designed to highlight the type of interactions taking place, and to reflect the characteristics of the type of information that could be exchanged about routine nursing interventions. The observations will be audio-recorded, and hence the observation schedule will be used to facilitate narrative field note-taking as applicable to each interaction. Clarification of points observed will be sought during interview.

A. **Type of interaction taking place:**
   - A.1. One which relates to a clinical intervention
   - A.2. One which relates to a non-clinical intervention
   - A.3. Other

B. **Type of information shared/provided:**
   - B.1. Patient’s social context
   - B.2. Condition or natural history of disease
   - B.3. Patient’s lay knowledge of disease/condition
   - B.3. Risk factors for disease/condition
   - B.4. Treatment/intervention – options, risks, benefits
   - B.5. Patient’s preferences
   - B.6. Patient’s emotional concerns
   - B.7. Possible outcomes of treatment/intervention
   - B.8. Follow-up care
   - B.9. Other

C. **Direction in which information flows (map of interactional flow):**
   - E.g. Nurse → patient, patient → nurse, or nurse ↔ patient.

D. **Information exchange:**
   - D.1. Interaction evidences elements of information exchange
   - D.2. Interaction does not evidence elements of information exchange
   - D.3. Other relevant features relating to information exchange
     - E.g. interruptions, inclusion of third party

Appendix 17: Patient semi-structured interview schedule

Semi-structured interview schedule – patient.

**Study title:** A qualitative case study of information exchange between patients and nurses in ward settings.

**Name of researcher:** Vivianne Crispin

Date:
ID no.:
Pseudonym:
Age:
Previous hospital admissions:
Reason for current admission:
Ward:
No. of days post-op (if applicable):

Up to three instances of interaction with one or more nurses will be identified to discuss in the interview. The following questions will be asked in relation to each extract of interaction:

**OPENING QUESTION**
‘Tell me about the conversation you had with your nurse about ……?’
Prompt – clinical or non-clinical intervention.

**TYPES OF INFORMATION**
‘What type of information did you share with the nurse?’
‘What information did the nurse share with you?’
Prompts – social context, preferences, disease condition, lay knowledge, emotional concerns, other.

**INFORMATION RELEVANCE AND QUANTITY**
‘How relevant was the information you received? Why?’
Prompts – what was the information needed for i.e. for decision-making, to relieve anxiety?
‘Was there anything else that you would have liked to share with the nurse?’
‘Was there anything else that you would have liked the nurse to share with you?’
‘On instances of non-exchange, was this problematic? Why?’

**CLOSING SUMMARY FOR EACH INTERACTIONAL EXTRACT**
‘Is there anything else you want to tell me about your conversation with the nurse about ……?’

Version 1 28/11/08  
REC Reference Number: 09/S0704/26
Appendix 18: Nurse semi-structured interview schedule

Semi-structured interview schedule – nurse.

**Study title:** A qualitative case study of information exchange between patients and nurses in ward settings.

**Name of researcher:** Vivianne Crispin

Date:  
ID no.:  
Pseudonym:  
Grade:  
No. of years’ experience:  
Time in current place of work:  
Ward:  

Below are the questions which will be asked of the nurse. Prompts and probes will be used to help keep the focus of the interview. Some questions may result from the observation stage, and as such cannot be specified here.

**OPENING QUESTION**
‘Tell me about the conversation you had with Patient X about ……?’  
Prompt – clinical or non-clinical intervention.

**TYPES OF INFORMATION**
‘What type of information did you share with the patient?’  
‘What information did the patient share with you?’  
Prompts – disease condition, risk factors, treatment/intervention, outcomes of treatment/intervention, follow-up care.

**INFORMATION RELEVANCE AND QUANTITY**
‘How relevant was the information that you received? Why?’  
Prompt – what was the information from the patient needed for?  
‘Was there anything else that you would have liked to share with the patient?’  
‘Was there anything else that you would have liked the patient to share with you?’  
‘On instances of non-exchange, was this problematic? Why?’

**CLOSING SUMMARY FOR EACH INTERACTIONAL EXTRACT**
‘Is there anything else you want to tell me about your conversation with the patient about…..?’

Version 1. 28/11/08  
REC reference no: 09/S0704/26
Appendix 19: Decisions made within the code of ‘Factors affecting information exchange’

Stage three of the analysis resulted in two inductive categories being coded under ‘Factors affecting information exchange’, which were ‘Barriers to information exchange’ and ‘Facilitators of information exchange’. The inductive sub-category of ‘Paternalism’ was identified from the data and aggregated under ‘Barriers to information exchange’. Further sub-categories of ‘Patient passivity’, ‘Language use’ and ‘Persuasion’ were aggregated under ‘Paternalism’. Figure 1 illustrates this coding process.

Figure 1: Stage 3 of coding under ‘Factors affecting information exchange’

As analysis progressed through stage four, the data evidenced that patient passivity did not necessarily occur because the patients preferred to remain passive, but because the nurses’ use of language may have disempowered the patients, which may then have resulted in patient passivity. Therefore a new sub-category of ‘Power and control’
was identified and coded under ‘Barriers to information exchange’. The sub-category of ‘Paternalism’ was changed to ‘Beneficence’, which evidenced how nurses appropriately cared for non-autonomous patients rather than exerting influence over autonomous patients. Figure 2 illustrates this next stage (Stage four) of coding and categorical aggregation.

Figure 2: Stage 4 of coding under ‘Factors affecting information exchange’

At stage four of the analysis the inductive sub-category of ‘Patient Passivity’ was aggregated under ‘Power and Control’. However, during further iterative analysis, and as I searched for deeper meanings of the data (stages four and six), I noted that patient passivity occurred not only because of nurses exerting power and control, but also because some patients preferred a more passive role. Therefore, the decision was made to move ‘Patient passivity’ out from ‘Power and control’ and directly under the
inductive category of ‘Barriers to information exchange’. A strong link remained between ‘Patient passivity’, and ‘Power and control’. Furthermore, additional sub-categories of ‘Nurses’ insecurities’ and ‘Limiting choice’ were aggregated under ‘Power and Control’.

Figure 3 illustrates the final coding and categorical aggregation under ‘Factors affecting information exchange’ relating to ‘Patient passivity’ and ‘Power and control’.

Figure 3: Stages 4 & 6 of coding under ‘Factors affecting information exchange’

---

**Diagram Description**

- **Inductive code ‘Factors Affecting Information Exchange’**
  - **Inductive category of ‘Barriers to Information Exchange’**
    - **Inductive sub-category of ‘Power & Control’**
      - **Inductive sub-category: Language Use**
      - **Inductive sub-category: Nurses’ insecurities**
      - **Inductive sub-category: Limiting choice**
    - **Inductive sub-category: Coercion/Persuasion**
    - **Inductive sub-category of ‘Patient Passivity’**

Denotes iterative nature of coding and categorising.

Emphasises link between ‘Patient Passivity’ and ‘Power and Control’.

(1) The notes column may be used by the main REC to record the early closure or withdrawal of a site (where notified by the Chief Investigator or sponsor), the suspension of termination of the favourable opinion for an individual site, or any other relevant development. The date should be recorded.
Appendix 22: NHS Research and Development approval – pilot study

Mrs. Vivianne J Crispin  
Postgraduate Research Student  
Dept. of Nursing and Midwifery  
University of Stirling  
Stirling FK9 4LA

Dear Mrs. Crispin,

Following approval from the Fife and Forth Valley Research Ethics Committee on 29 October 2008, I am pleased to confirm that I formally gave Management approval to “A qualitative study of information exchange between patients and nurses in ward settings: a pilot study” on 6 November 2008. This approval is subject to the provision of an appropriate honorary research contract or letter of access for yourself.

The Research Governance Framework for Health and Community Care applies to all research undertaken within NHS Forth Valley. The Framework sets out standards and details the key responsibilities of key individuals, including the research sponsor, principle investigator, other researchers and supervisors of students undertaking research.

All those involved in the project will be required to work within accepted guidelines of research governance and ICH-GCP guidelines.

A copy of the Framework and links to background annex material can be accessed via the Chief Scientist Office website at: http://www.sehd.scot.nhs.uk/cso/Publications/ResGov/Framework/RFGEaTwo.pdf and ICH-GCP guidelines may be found at http://www.ich.org/LOB/media/MEDIA482.pdf

You will be required to provide a progress report on your study at the end of the study. We will also require a copy of the final report, when available. You will also be asked annually to complete a form on the activity taking place in relation to the study within Forth Valley, for each financial year during which it is active here, and may be asked to provide other information. The appropriate forms will be provided to you by the Research and Development office when they are needed.

Yours sincerely,

DR. GARETH DAVIES  
Medical Director

Participant information sheet for nurses

A qualitative case study of information exchange between patients and nurses in ward settings: a pilot study
Introduction

You have been invited to participate in the pilot study phase of a research study. Before you agree to take part, it is important for you to understand why the research is being done, and what it will involve. Please take some time to read the information below. If you want more information, or have any queries about any of these points, please contact me on the telephone number overleaf.

What is the purpose of this project and who is supporting it?

The study is a postgraduate student research project, which is supervised by Dr Carol Bugge, Dr Kath Stoddart and Ms Cheryl Tringham at the Department of Nursing and Midwifery at the University of Stirling. The study is supported by a University of Stirling PhD studentship. The purpose of the study is to examine the information that patients and nurses tell one another about routine nursing care, and their views on that interaction. The aims of the pilot study to which you are invited to participate are: to review the research process for the main study; to examine the procedures for recruitment and consent; and to test the methods for collecting and analysing the information obtained. The pilot study will run from December 2008 – February 2009.

Why have I been chosen?

You have received this invitation because you are a registered staff nurse or ward manager and you work in a surgical or medical ward in NHS Forth Valley. As part of your job, you are interacting with patients on a day-to-day basis.

Do I have to take part?

Taking part in the pilot study is voluntary and it is entirely up to you whether or not to take part. I hope to meet with nurses in a group setting, offering you the opportunity to ask questions about this study and clarifying any issues that you may have. If you wish to take part, you can sign a consent form after the meeting, or alternatively you can post the signed consent form directly to me. If you are unable to attend the meeting but wish to get more information, I can meet with you individually at a time and place convenient for you. You can contact me on the number provided overleaf.

If you change your mind at any time, you are free to withdraw from the study without having to give a reason. Your unit manager will be unaware as to whether or not you are taking part, unless you wish to tell him/her.

What will happen to me if I take part?

During your shift I will be sitting in the ward area observing and recording short sessions of communication between you and a patient you are caring for, in relation to the type of information that is shared between you. I will not be observing your hands-on nursing practice.
During this stage of the study I will be audio-taping the interaction and taking notes. Following the observations, I will interview you and the patient individually. The kind of questions I will ask you will be about the type and amount of information you have received. I am interested in whether or not you feel that the information you receive from the patient is sufficient for you. I will also want to explore how much information you shared with the patient. The interview will take about 10 minutes and will take place as soon as possible after the interaction at a time convenient to you. I will use the notes from my observations to prompt you.

If you change your mind, any interaction between you and the patients in the ward will not be included in this study. Likewise, I will only be able to observe interactions, and conduct interviews with you if the patient has agreed to take part. In the highly unlikely event that I observe evidence of malpractice, I will inform the nurse in charge.

The purpose of this pilot study is to examine the recruitment, observation and interview procedures before a larger study is carried out. For this reason, I will also ask you questions relating to your opinions about taking part in the study.

**Will my taking part in the study be kept confidential?**

Yes. I will audio-record each interaction, take notes during the observation stage, and the interview will also be recorded. Any irrelevant or identifiable information recorded will, if possible, be deleted and will not be used in any way in the study. All notes and recordings have numbers, not names. All audio-recordings and any written records will be kept in a secure, locked environment for the duration of the study. Once the study is completed and the data is analysed, all audio-recordings will be destroyed. All written records will be archived in the University of Stirling for five years. Thereafter they will be destroyed.

My supervisors at the University of Stirling will monitor the pilot study, and the results will inform the design of the main study. You will not be identified in any written reports. Any quotes used from the recordings will be anonymised by the use of codes and false names. All identifiable information will be kept strictly confidential, known only to the researcher and the supervisors.

**Who has approved this study?**

This study has been reviewed by a NHS Research Ethics Committee which has responsibility for scrutinising proposals for medical research on humans, in accordance with the requirements of the Clinical Trials Regulations. In this case, the reviewing Committee was the Fife and Forth Valley Research Ethics Committee who have raised no objections from the point of view of medical ethics. The study has also been approved by the University of Stirling’s Department of Nursing and Midwifery Research Ethics Committee, and by NHS Forth Valley Research and Development Office.

Thank you for taking time to consider taking part in the study.

Participant information sheet for surgical patients

A qualitative case study of information exchange between patients and nurses in ward settings: a pilot study
Introduction

You are invited to participate in the pilot study phase of a research study. Before you agree to take part, it is important for you to understand why the research is being done, and what it will involve. Please take some time to read the information below. If you want more information, or have any queries about any of these points, please contact me on the telephone number overleaf.

What is the purpose of this project and who is supporting it?

The pilot study is part of a postgraduate student research project, which is supervised by Dr Carol Bugge, Dr Kath Stoddart and Ms Cheryl Tringham at the Department of Nursing and Midwifery at the University of Stirling. The study is supported by a University of Stirling PhD studentship. The purpose of the study is to examine the information that patients and nurses tell one another about routine nursing care and their views on that interaction. The aims of the pilot study to which you are invited to participate are: to review the research process for the main study; to examine the procedures for recruitment and consent; and to test the methods for collecting and analysing the information obtained. The pilot study will run from December 2008 – February 2009.

Why have I been chosen?

You have received this invitation because you have been identified as someone who will be admitted to hospital during the study dates. A selection of male and female adult patients on the waiting list for surgery in NHS Forth Valley have been invited to take part.

Do I have to take part?

Taking part in the pilot study is voluntary and it is entirely up to you whether or not to take part. If I have not heard from you before your admission to hospital, I will assume that you do not want to take part and no further contact will be made with you. Overleaf are my contact details, please feel free to contact me if you have any questions. If you are interested in taking part, please fill in the form enclosed and post it to me in the envelope provided and I will arrange an appointment with you. At this appointment you will be given the opportunity to ask questions about the research and, if you are still willing, to sign a consent form. If you change your mind at any time, you are free to withdraw from the study, without having to give a reason.

What will happen to me if I take part?

During your hospital admission, I will be sitting in the ward area observing and audio-recording short sessions of communication between you and the nurses caring for you and listening to what type of information is shared between you. During this stage of the research I will be taking notes. Following the observations, I will interview you and your nurse individually. The kind of questions I will ask you will be about the type and amount of information you have received. I am interested in whether or not you feel you have received enough information for your needs. I will also want to explore how much information you shared with the nurse. The interview will take about 30 minutes and will take place in a quiet room in or near your ward, or at your bedside. If
you change your mind, any interaction between you and the nurses in the ward will not be included in this study. Likewise, I will only be able to observe interactions and conduct interviews with you if the nurse has agreed to take part.

The purpose of this pilot study is to examine the recruitment, observation, and interview procedures before a larger study is carried out. For this reason, I will also ask you questions relating to your opinions about taking part in the study.

**Will my taking part in the study be kept confidential?**

Yes. I will audio-record each interaction, take notes during the observation stage and the interview will also be audio-recorded. Any irrelevant or identifiable information recorded will, if possible be deleted, and will not be used in any way in the study. All notes and recordings have numbers, not names. All audio-tapes and any written records will be kept in a secure, locked environment for the duration of the study. Once the study is completed and the data is analysed, all audio-recordings will be immediately destroyed. All written records will be archived in the University of Stirling for five years. Thereafter, they will be destroyed.

My supervisors at the University of Stirling will monitor the pilot study and the results will be used to inform the design of the main study. You will not be identified in any written reports. Any quotes used from the recordings will be anonymised by the use of codes and false names. All identifiable information will be kept strictly confidential, known only to the researcher and the supervisors.

**Who has approved this study?**

This study has been reviewed by a NHS Research Ethics Committee which has the responsibility for scrutinising proposals for medical research on humans, in accordance with the requirements of the Clinical Trials Regulations. In this case, the reviewing Committee was the Fife and Forth Valley Research Ethics Committee who have raised no objection from the point of view of medical ethics. The study has also been approved by the University of Stirling’s Department of Nursing and Midwifery Research Ethics Committee, and by NHS Forth Valley Research and Development Office.

Participant information sheet for medical patients

A qualitative case study of information exchange between patients and nurses in ward settings: a pilot study
Introduction
You have been invited to participate in the pilot study phase of a research study. Before you agree to take part, it is important for you to understand why the research is being done, and what it will involve. Please take some time to read the information below. If you want more information, or have any queries about any of these points, please contact me on the telephone number overleaf.

What is the purpose of this project and who is supporting it?
The pilot study is part of a postgraduate student research project, which is supervised by Dr Carol Bugge, Dr Kath Stoddart and Ms Cheryl Tringham at the Department of Nursing and Midwifery at the University of Stirling. The study is supported by a University of Stirling PhD studentship. The purpose of the study is to examine the information that patients and nurses tell one another about routine nursing care, and their views on that interaction.
The aims of the pilot study to which you are invited to participate are: to review the research process for the main study; to examine the procedures for recruitment and consent; and to test the methods for collecting and analysing the information obtained. The pilot study will run from December 2008 – February 2009.

Why have I been chosen?
You have received this invitation because you have been admitted to a medical ward during the study dates. Male and female adult patients admitted to a medical ward in NHS Forth Valley have been invited to take part if they are considered well enough.

Do I have to take part?
Taking part in the pilot study is voluntary and it is entirely up to you whether or not to take part. If you do not state that you want to be involved in this study, I will assume that you do not want to take part and no further contact will be made with you.

Overleaf are my contact details. If you are interested in taking part, please contact me or speak to another member of staff. I will then arrange to meet you. At this meeting you will be given the opportunity to ask questions about the research and, if you are still willing, to sign a consent form.

If you change your mind at any time, you are free to withdraw from the pilot study, without having to give a reason.

What will happen to me if I take part?
During your hospital admission, I will be sitting in the ward area observing and audio-taping short sessions of communication between you and the nurses caring for you and listening to what type of information is shared between you.
During this stage of the research I will be taking notes. Following the observations, I will interview you and your nurse individually. The kind of questions I will ask you will be about the type and amount of information you have received. I am interested in whether or not you feel you have received enough information for your needs. I will also want to explore how much information you shared with the nurse. The interview will take about 30 minutes, and will take place in a quiet room in or near your ward, or at your bedside. If you change your mind, any interaction between you and the nurses in the ward will not be included in this study. Likewise, I will only be able to observe interactions, and conduct interviews with you if the nurse has agreed to take part.

The purpose of this pilot study is to examine the recruitment, observation, and interview procedures before a larger study is carried out. For this reason, I will also ask you questions relating to your opinions about taking part in the study.

**Will my taking part in the study be kept confidential?**

Yes. I will audio-record each interaction, and will take notes during the observation stage, and the interview will also be audio-recorded. Any irrelevant or identifiable information recorded will, if possible, be deleted, and will not be used in any way in the study. All notes and recordings have numbers, not names. All recordings and any written records will be kept in a secure, locked environment for the duration of the study. Once the study is completed and the data is analysed, all audio-recordings will be immediately destroyed. All written records will be archived in the University of Stirling for five years. Thereafter, they will be destroyed.

My supervisors at the University of Stirling will monitor the pilot study, and the results will be used to inform the design of the main study. You will not be identified in any written reports. Any quotes used from the recordings will be anonymised by the use of codes and false names. All identifiable information will be kept strictly confidential, known only to the researcher and the supervisors.

**Who has approved this study?**

This study has been reviewed by a NHS Research Ethics Committee which has the responsibility for scrutinising proposals for medical research on humans, in accordance with the requirements of the Clinical Trials Regulations. In this case, the reviewing Committee was the Fife and Forth Valley Research Ethics Committee who have raised no objections from the point of view of medical ethics. The study has also been approved by the University of Stirling’s Department of Nursing and Midwifery Research Ethics Committee, and by NHS Forth Valley Research and Development Office.

Appendix 29: Medical patient invitation letter – pilot study

Letter of invitation – Medical patients

REC Reference Number: 08/S0501/80

Title of Project: A qualitative case study of information exchange between patients and nurses in ward settings: a pilot study.

Name of Researcher: Vivianne Crispin

Dear

You are invited to participate in the pilot study phase of a research study. You have received this invitation because you have been admitted to a medical ward during the study dates. Male and female adult patients admitted to a medical ward in NHS Forth Valley have been invited to take part if they are considered well enough.

Before you agree to take part, it is important for you to understand why the research is being done, and what it will involve. Please take some time to read the information on the enclosed information sheet. Feel free to talk to others about this study if you wish. If you want more information, or have any queries about any of these points, please contact me on the telephone number above. Alternatively, if you wish further information from my academic supervisor, feel free to contact Dr Carol Bugge on 01786 466109.

Thank you for taking the time to consider taking part in this project.

Yours sincerely,

Vivianne Crispin
PhD Student

Appendix 30: Explanation of paternalism and paternalistic language

Although the language used by nurses was central to maintaining power over patients, it was not the remit of this study to use or discuss types of professional discourses, such as Discourse Analysis (DA) or Conversational Analysis (CA). Paternalism is defined as ‘when people in authority think or act in a way which results in them making decisions for other people which are often to their advantage but which prevent those people from taking responsibility for their own lives’ (Cambridge Dictionary Online undated). Paternalism in healthcare correlates with the ethical principle of beneficence, which means ‘to do well’ (Nullity 2007). However one of the limitations of beneficence is that it can conflict with autonomy. For example, treating patients beneficently, or paternalistically, involves healthcare professionals making decisions on behalf of patients. However, patients who are autonomous have the right to make their own decisions regarding treatment and care. Paternalistic use of language in this study is therefore defined as language used (either sentences or individual words) that perpetuates paternalism rather than promotes patient autonomy.
## Appendix 31: Questions asked by patients and by nurses

<table>
<thead>
<tr>
<th>Cases</th>

<tr>
<td>9.</td>
<td>Could you take my chair into there [bathroom] for me? When does this [VAC dressing] get changed? Will you phone them [district nurses] today? Did you know my back was itchy last night? Wonder what that [VAC pump] cost, eh? Does it go by battery? Can I ask you to wash my back? This is blood that’s coming out [from the VAC pump], should it be? Are you off tomorrow Oliver? Oh, it [progress] just takes time, doesn’t it?</td>
<td>Nurse 1: How are you this morning? What do you want me to do for a wash for you this morning? Have you seen the wee one [VAC pump] before? Are you prescribed something for the itch? What do you want to do Iris? Do you want to sit up for a bit in your chair for a while?</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Nurse 2: How do you feel it [VAC pump working] with the dressing on? Can you feel it? Is your eating better, would you say? Do you want us to put the wee light off? Do you wanna go for a wee sleep?</td>
</tr>
<tr>
<td>10.</td>
<td>Will we take all this [irrigation fluid] down? You got towels and everything? Everything okay? You want to go under the covers, or…you want to just lie on the top? Is it [dizziness] easing at all?</td>
<td>Will we take all this [irrigation fluid] down? You got towels and everything? Everything okay? You want to go under the covers, or…you want to just lie on the top? Is it [dizziness] easing at all?</td>
</tr>
<tr>
<td>11.</td>
<td>Your date of birth? Any allergies? What about painkillers for that wound? Are the Paracetamol helping? Do you want some of this Appletizer, or do you want some water? Could I get the physiotherapist to have a look and assess you?</td>
<td>Your date of birth? Any allergies? What about painkillers for that wound? Are the Paracetamol helping? Do you want some of this Appletizer, or do you want some water? Could I get the physiotherapist to have a look and assess you? What was your INR yesterday?</td>
</tr>
<tr>
<td>12.</td>
<td>Is that [heart rate] good? We’re going the right way anyway? [progress] See that [scan] what I’m going for, why am I going for that? It’s only scarring [on my lungs]?</td>
<td>Did you feel sick at home? Any pain? No breathlessness? Bowels moved today?</td>
</tr>
<tr>
<td>13.</td>
<td>Still a wee bit breathless…it’s that infection isn’t it? Are you gonnae gie some [antibiotics] hame wi’ me, aye?</td>
<td>How are you this morning? What family is it you’ve got up here? You’ve got family down in England, haven’t you?</td>
</tr>
<tr>
<td>14.</td>
<td>What like is ma tongue? What is my blood sugar? That’s [blood sugar level] alright, isn’t it? Gonnae check if the commode’s free? Is it [catheter] sore coming out? Am I ticking fine? [progress]</td>
<td>Can I take your blood sugar? Do you want to get up to sit? Did you not have a good sleep last night? Are you just tired this morning? You’ll be fed up with us doing this [checking blood sugar] are you not? Do you think you’ve bit it [tongue]? Have you got a jaggy tooth or something?</td>

| 15.   | What like is ma tongue?  
What is my blood sugar?  
That’s [blood sugar level] alright, isn’t it?  
Gonnae check if the commode’s free?  
Is it [catheter] sore coming out?  
Am I ticking fine? [progress]  
I will know when I need the toilet?  
Will it be alright? [if she is incontinent after catheter removal] | Can I take your blood sugar?  
Do you want to get up to sit?  
Did you not have a good sleep last night?  
Are you just tired this morning?  
You’ll be fed up with us doing this [checking blood sugar] are you not?  
Do you think you’ve bit it [tongue]? Have you got a jaggy tooth or something?  
Are your bowels moving? Are your bowels moving most days? Do you want your Movicol? Bowels not too soft or anything?  
Are you alright for another half an hour or so or will I just take it [catheter] out for you?  
Do you think you can manage to lie on your side for a wee while?  
Would you be able to stand up at the side of your bed?  
Do you want to give your face a wee wash?  
Have you had a wee mouth wash today? |
| 16.   | Is that the Gliclazide tablet? | How was your blood sugar this morning, do you know?  
What does your missus work as?  
Any problems passing urine or anything?  
Bowels moving okay? |
| 17.   | I take it the test came back clear then?  
Can you get the painkillers over the counter?  
That test came back clear then?  
Can I get changed then? | Do you need painkillers away with you?  
Who’s coming to pick you up?  
Will your husband come quite quickly?  
Do you have any questions? |
| 18.   | Did you give me the wee anti-nausea one [tablet]?  
Could you possibly pass down a drink of water?  
Nah, its [large dressing] not required is it? | Nurse 1:  
How are you doing?  
Do you need anything for your bowels?  
Is it [venflon site] sore?  

Nurse 2:  
I’m just coming to do your dressing, is that okay?  
Your stoma bag, are you doing that yourself?  
Is the cream for you eczema?  
You’re no’ allergic to any of these dressings are you?  
Is this [dressing change] getting done every day then?  
When did you last get it [dressing change] done then?  
Can I take that wee pad?  
Do you need anything before I go? |
| 19.   | Could I ask you please to put that bottle of juice back in the fridge for me please? | Do you want a shower Tracy?  
Are you doing your own insulin then? |
